### Polaris Develops World's Best Wireless Headset for the Office

Polaris proudly launches its new HD Wireless™ Headset – the world's best wireless headset for the Office.

The HD Wireless is modelled on Polaris' award winning Soundshield Wireless Headset which was uniquely designed for contact centres. The company strongly felt that something similar was needed for office headset users; a headset product which enhanced the user's communication experience.

#### **Touchscreen**

Offering a large colour touchscreen that gives the user visual feedback, the HD Wireless headset is in a league of its own. The touchscreen provides unprecedented call controls right at the user's fingertips which are intuitive and easy to use.

#### **HD Wideband Sound Quality**

Producing a headset which was visually appealing and easy to use was very important, but just as important was developing a headset which provided the very best in sound quality. The HD Wireless headset does just that, whilst still having the unsurpassed level of acoustic protection that Polaris is renowned for.

#### **Desk-phone and PC Connectivity**

The communications experience via the HD Wireless extends beyond the desk-phone and into the rapidly growing world of Unified Communications. With desk-phone / PC connectivity, the HD Wireless gives headset users access to UC applications such as Microsoft® Lync™ and Cisco® WebEx® as well as VoIP and other soft-phone applications.

Polaris was very much focussed on providing the headset user with the best overall headset experience. The company has put a lot of effort into the design of the HD Wireless headset; making it slimline and stylish to reflect the modern desktop, and taking up a minimal amount of desktop space.

"This is a desktop device that is not only functional but that will take pride of place on anyone's desk!" comments Wayne Guest, Polaris' Managing Director.

Going forward, Polaris will continue its product development based on customer feedback; always striving to enhance the user experience and achieve a level of excellence that its products deserve.
